- SOAP (Web Service)
- Individual protocols

History

Telecommunication branch of ISBC Group was founded in 2006 after mutual cooperation with one of the Company's client. For this Client ISBC developed new program decision in order to operate with access control equipment through Internet and mobile communication services (including SMS). This project was successfully realized in 2007 and became a ground for platform QUICKTEL® development.

Safety and Reliability

QUICKTEL® meets all the field requirements for information security. ISBC has all the licenses needed for proper telecommunication services, given by Federal Service for Technology and Export Control.

QUICKTEL® supports up to 1200 sms per second.
